The Remember Project

Butterfly Cut Outs and Installation

Created by Leslie Ruben

Materials

1. Black construction paper
2. Multicolored tissue paper cut into random sizes
3. White printer paper
4. Glue
5. Scissors
6. Paintbrush
7. Circut machine (optional)
8. Chicken wire (optional)

Procedure

1. Cut out butterflies in varies sizes - This can be done using the Circut design space and Circut machine. Butterflies with large open spaces work best.
2. Trace the outline of the butterfly onto white printer paper
3. Layer tissue paper onto the outline using glue. Make sure that the entire Space is covered with tissue paper

4. Once all the template is filled with the tissue paper. Place the cut out butterfly over the colorful tissue paper. Paint the glue over the entire project and let dry. (This is important so that the butterfly is hard enough to bend and glue on canvas)

5. Cut out butterfly

6. Paint canvas with desired background

7. Hot glue butterflies onto canvas.
To get dimension, you can place bottle caps
or package peanuts behind the butterflies for dimension

8. Wrap chicken wire around the bottom and attach additional butterflies with hot glue
